EDUCATION

University of California, Los Angeles *Los Angeles, CA*

Jun 2025

Masters in Applied Statistics and Data Science

University of California, Berkeley, CA *Berkeley, CA*

May 2021

Bachelor of Arts, Statistics

WORK EXPERIENCE

Artificial Intelligence Scientist ([Zebra](#))

Remote *Apr 2025 - Jan 2026*

- Designed and implemented a solver in Python as part of a team to calculate a fix set of configurations to meet the demand of all stores and minimize excess in a profit optimal approach for a \$4B company to aid product distribution
- Reduced algorithm runtime from 80 minutes to 15 minutes to heuristically search 10^{13} combinations by employing NumPy vectorization and caching calculations.
- Supported code development by creating unit tests and documentation for ease of understanding

Statistical Consultant ([UCLA Statistical Consulting Center](#))

Westwood, CA *Oct 2024 - Jun 2025*

- Provided statistical expertise to clients in methods such as hypothesis testing, experimental design, and programming using R or Python
- Advised clients from UCLA's other department fields such as medicine and social sciences

Data Analyst ([Spotlio](#))

Remote *Jan 2022 - Apr 2024*

- Created pricing plans to benefit the client's fiscal goals through understanding their specific operational needs and analyzing past prices via Excel and Python
- Recommended pricing strategies across multiple resorts with the potential to earn \$180,000 in additional revenue through anomaly detection methods in Excel
- Collaborated with Sales team an ML-based sales prospecting tool to enhance closure rates for client representatives
- Designed and coded a data driven animation of dynamic pricing in action that is featured prominently during sales presentation

SKILLS

- **Languages:** Python (NumPy, Pandas, Matplotlib), R (dplyr, ggplot2, glmnet, caret)
- **Tools:** MySQL, Advanced Excel, Jupyter, Git, Docker

PROJECTS

Purchasing Demographic Analysis for a Magic Retailer

2025

- Partnered with a magic-trick retailer to analyze how customer attributes influence purchasing behavior as my thesis project while at UCLA.
- Built a logistic regression model to quantify the correlated effects of geospatial and behavioral features on yearly spending.
- Determined big spenders as customers who bought a few, highly valued products, irrelevant of location.

Association between Name Sex and Name Spelling

2024

- Utilized a self created AWS instance as a method of data sharing between group members
- Fitted Name Gender using logistic regression and found names ending with a vowel are 10 times more likely to be female than male

Influence of Crime Patterns on Income Disparity

2023

- Group project to find the relationship about the details of a crime to LA county income level
- Compared 3 models: ensemble of 1 vs rest logistic regressions, multinomial regression, and random forest based on accuracy and ROC curve performance
- Found that victim ethnicity is the best predictor of income level rather than nature of crime

Predicting Traffic Severity via Geo-spatial Data

2021

- Modeled the ranked severity of traffic accidents using 3 million data points of raw geospatial data
- Cross validated the predictive error of each model resulting in random forest being used
